

Install Guardian

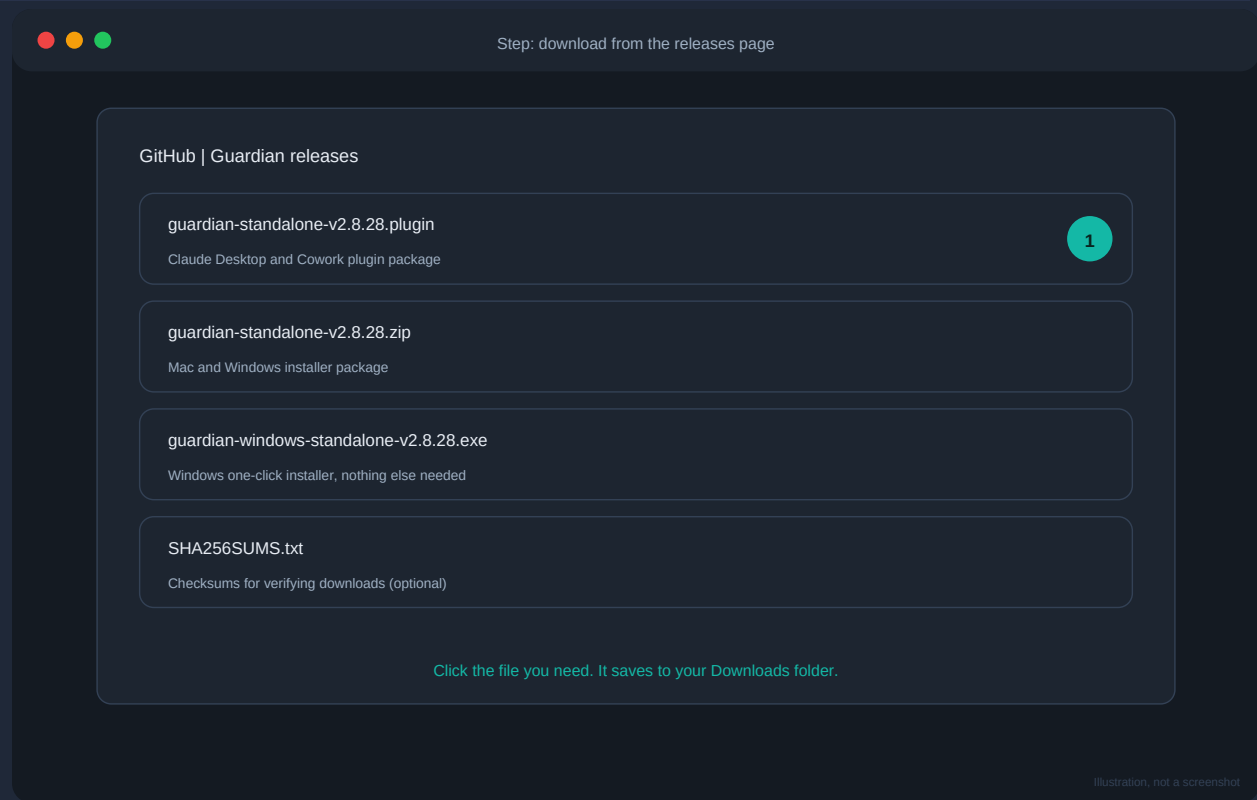

Guardian install

Guardian installs in about two minutes. Pick your path below. Every step image on this page is a drawn illustration of the flow, not a captured screenshot.

What you need

- A computer running Claude Desktop on Mac or Windows
- One downloaded file from the releases page (Step 1)
- A license key if you purchased a paid tier; the free Scout tier runs without one

Step 1: download your file

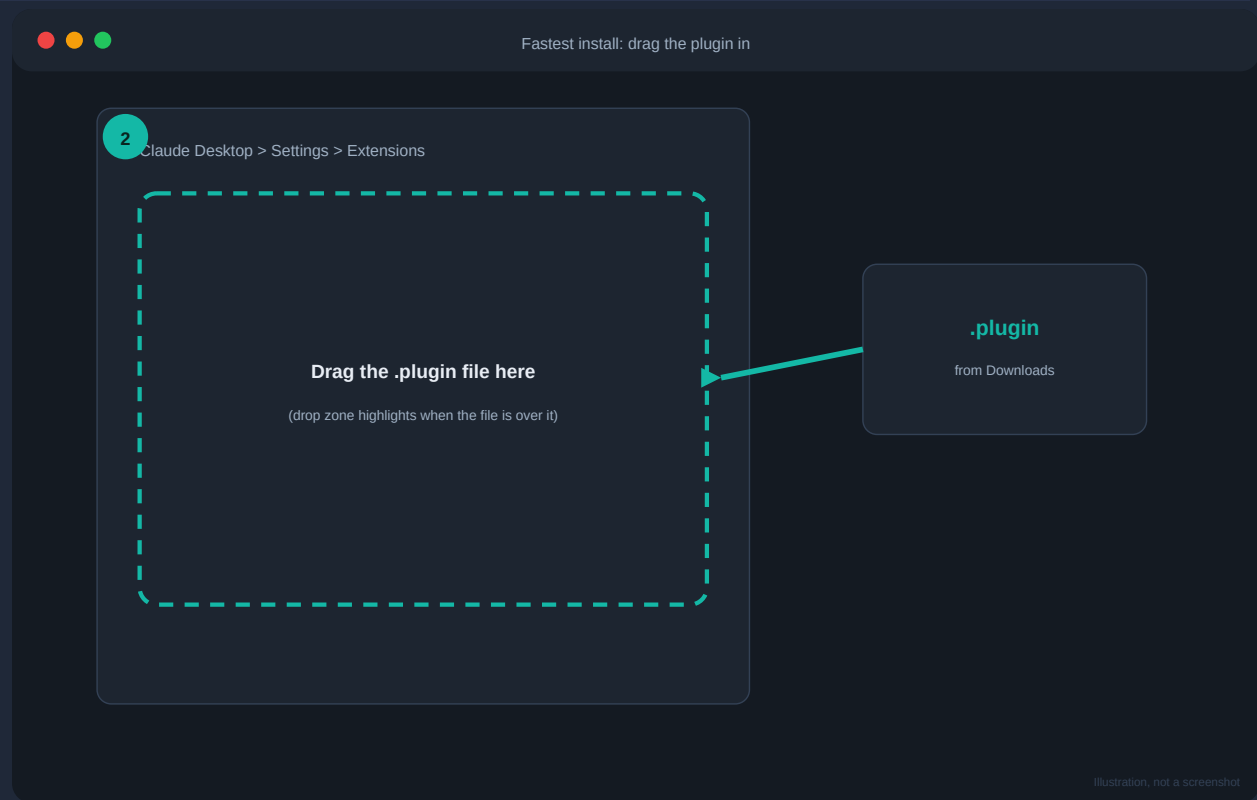

Download from the releases page

Open the Guardian releases page and download the file that matches your setup:

- Claude Desktop or Cowork, Mac or Windows: guardian-standalone-v2.8.28.plugin
- Windows with nothing else installed: guardian-windows-standalone-v2.8.28.exe
- Mac or Windows with Node.js already installed: guardian-standalone-v2.8.28.zip

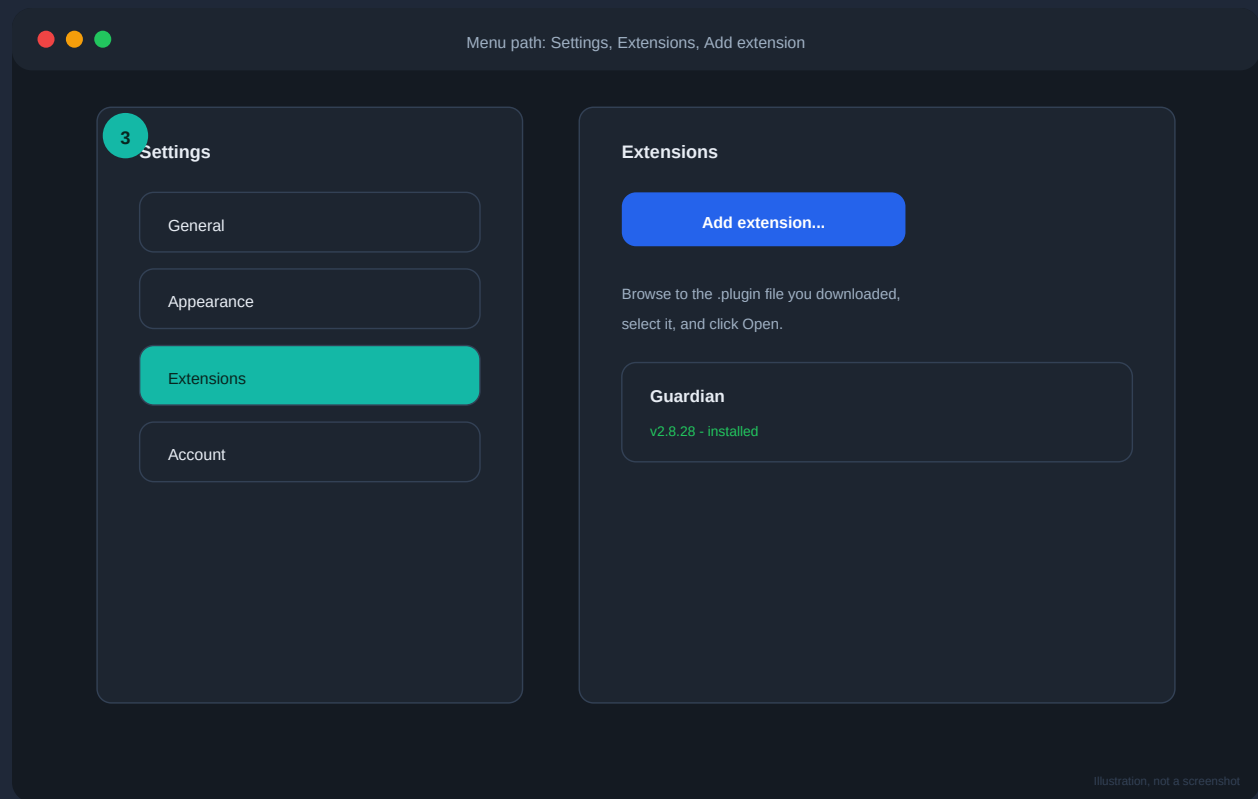

Step 2, plugin path: drag it in

Drag the plugin into Extensions

1. Open Claude Desktop.
2. Open Settings, then Extensions.
3. Drag the downloaded .plugin file into the window and drop it.

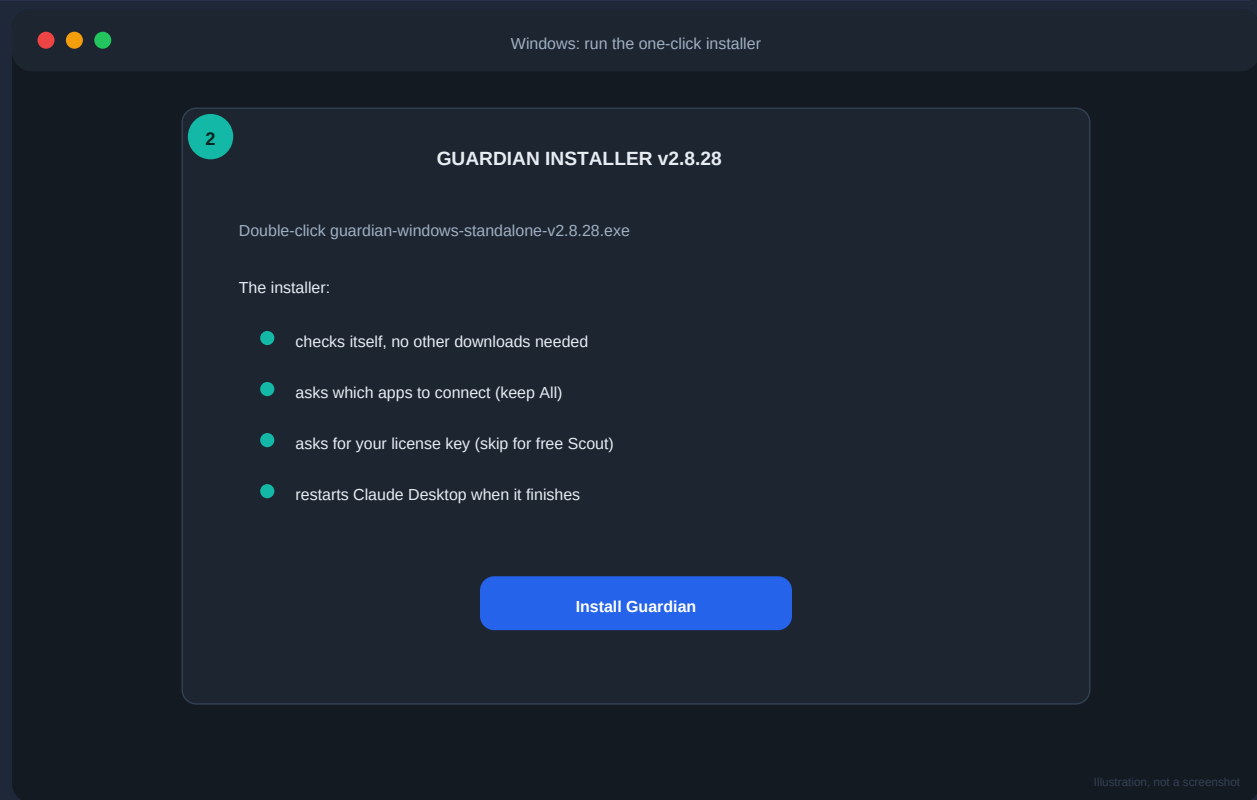

Prefer menus to dragging? The button path lands in the same place:

Settings, Extensions, Add extension

1. Open Settings, then Extensions, then Add extension.
2. Pick the .plugin file from your Downloads folder and click Open.

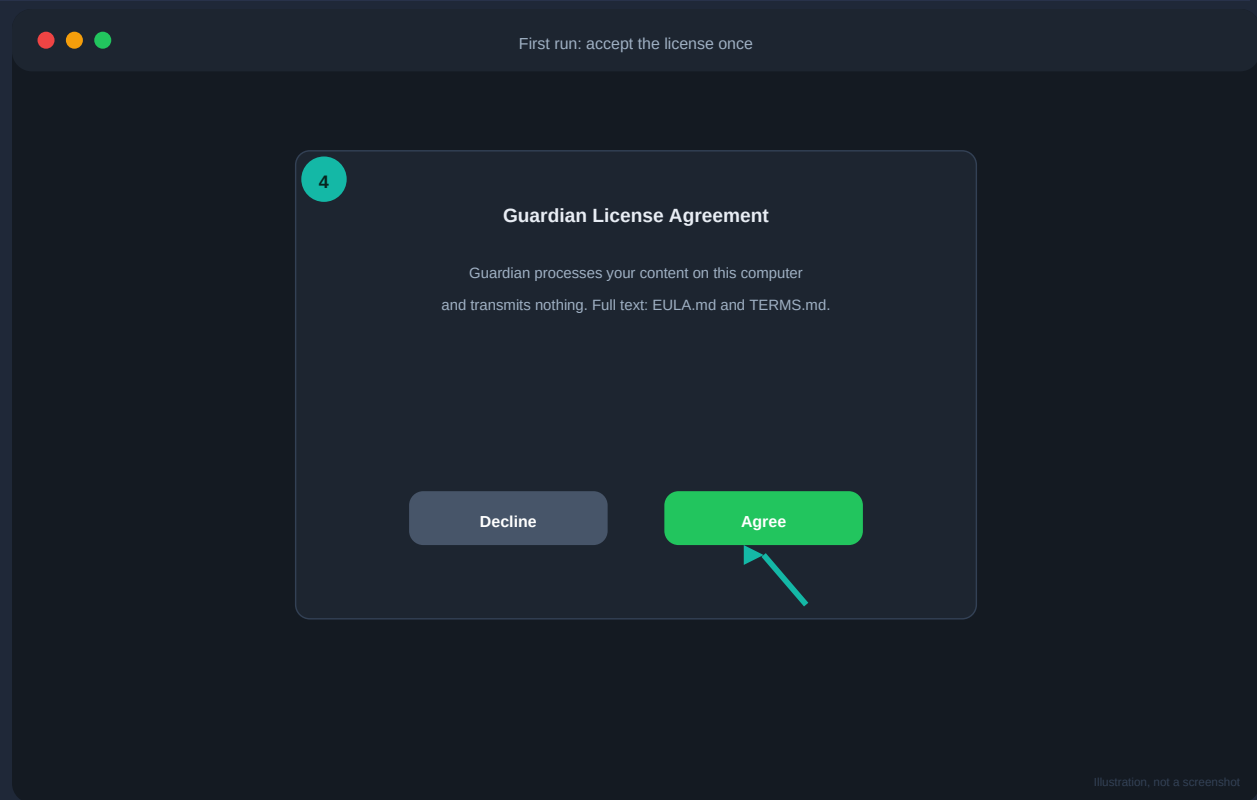

Step 2, Windows one-click path: run the installer

Run the Windows installer

1. Double-click guardian-windows-standalone-v2.8.28.exe.
2. Keep All when it asks which apps to connect.
3. Enter your license key when asked, or skip it for the free tier.
4. Let it restart Claude Desktop when it finishes.

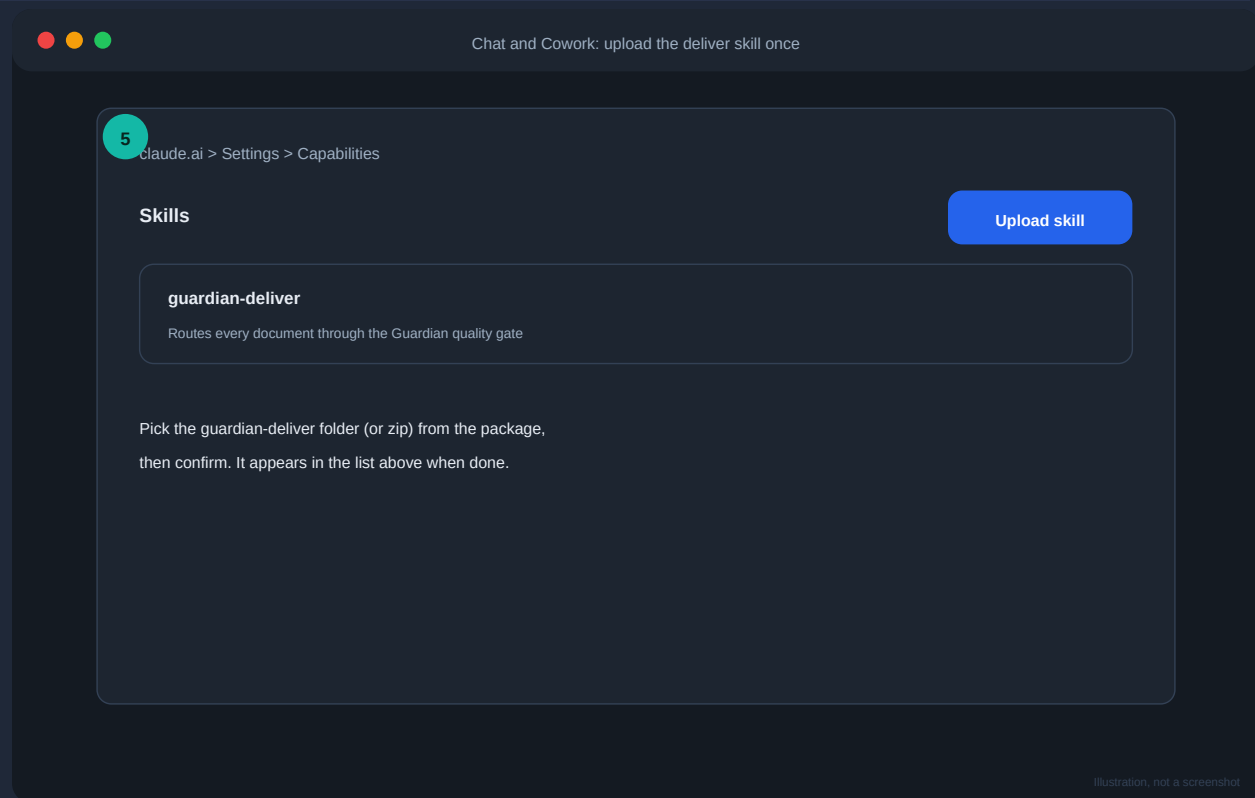

Step 3: accept the license

Accept the license

The first run shows the license agreement once. Click Agree. Guardian stays inactive until you do, and a version update asks once more.

Step 4, Chat and Cowork on claude.ai: add the deliver skill

Upload the deliver skill

Desktop installs carry this skill automatically inside the plugin. For claude.ai in a browser: open Settings, then Capabilities, choose Upload skill, and pick the guardian-deliver folder from the package. One upload covers your whole account.

Done: check that it worked

Open a new conversation and look for the tools icon near the message box. Type "Guardian status". A reply naming your tier and mode means everything connected. Anything else: open TROUBLESHOOTING.md, the fixes are short.
